*Specialists In Mutilation Prevention And Safety Tooling
For The Assembly Industry*

IF YOU WANT TO **STOP BLEEDING...**
MONEY, IMPROVE THE SAFETY OF
THE TOOLS.
**COVER THE PINCH POINTS WITH OUR "NO-MAR"
PROTECTA-SLEEVE™ COVERED TOOLS.**

The rotating plastic sleeves that are on a vast majority of our tools have been proven to have safety benefits far exceeding our expectations. Many of our customers have said fingers and hand injuries were reduced dramatically after they began using our tools. These are just a few examples of our tools that will provide not only mutilation protection to painted surfaces but also protect your employees from injury.

One area of concern in automotive assembly plants lately has been the expense associated with damaged alloy wheels. Production Tool Co. has worked closely with several facilities in designing solutions for wheel multiple sockets. The wheel multiple socket needs to be strong yet not bulky. Mutilation preventing sockets need to be covered yet durable. Our new bonded 'Pro-Tek' covers offer excellent protection.
