*Specialists In Mutilation Prevention And Safety Tooling
For The Assembly Industry*

OUR "MUTILATION PREVENTION" GAP, FLUSHNESS & PAINT GAGES HAVE BECOME INDUSTRY STANDARDS.

OUR HAND TOOLS FOR INSTALLING SCRIVETS AND PRY TOOLS TO REMOVE SCRIVETS PREVENT DAMAGED THUMBS AND SCRATCHED PAINT AND PANELS.

MANY MORE TYPES OF THESE ITEMS ARE AVAILABLE AT PRODUCTION TOOL COMPANY.

Our Go/No-Go plastic gap gages on top can be furnished in any combination required starting at 1/4MM then from 1/2MM to 6MM going up in 1/2MM sizes.

The second tool is our all plastic "No-Mar" taper/flushness gage and it is designed to measure flushness variations and gaps.

The third gage is designed for checking defects on painted surfaces. It has holes for checking interior and exterior surfaces and a 0-20MM quick reference scale for distance.

The fourth plastic scale and gage has a range to 30MM in increments of 1MM and also has a 2.5MM thickness for checking gaps.

Last, but certainly not least, our "No-Mar" gage has no equal for versatility on any assembly line. It fits in your shirt or trouser pocket for handy access to check gaps from 2MM to 12MM. The top "T" portion is tapered from 2.5MM to 4MM. It also has an accurate 20MM scale across the "T" section.

The bottom tool is designed for the installation of the scrivet fasteners or clips. This tool has a plastic cover to prevent marring of surfaces. Available with "ergo" handle for better comfort and grip.

The middle tool is designed for the removal of scrivets or any type of plastic fastener that has been misaligned or damaged in the installation process. Its all plastic design and coated handle remove the risk of any damage to the painted surface.

The top universal tool is designed for the run channel, various other types of molding installation and final finessing of carpet, sunroof seal, etc., etc.
