

Assembly Tools

With the economy distressed and low vehicle sales predicted, now more than ever, is the time to reduce costs on the assembly line. Every scratch or ding requires one of the terrible three R's. Repair, repaint and replacement costs are PREVENTABLE but seem to be undetermined or ignored. They cost your plant and industry millions in losses every year. Our tools with protective sleeves and covers STOP these losses.

The increased use of gloves of all types has presented the danger of the gloves being caught in various pinch areas between the power tool and the fastener. Our **Assembly Tools** reduce or eliminate those pinch spots with our free-spinning "Protecta-Sleeve" covers made of "No-Mar" material.

The spring-loaded retractable sleeve of the **Seat Belt Install Tool** surrounds and captures the head of the bolt giving the installer complete control of the fastener.

Also there is no damage to the interior or exterior as they exit the vehicle because the bit is covered with the "No-Mar" sleeve.
